

Applications

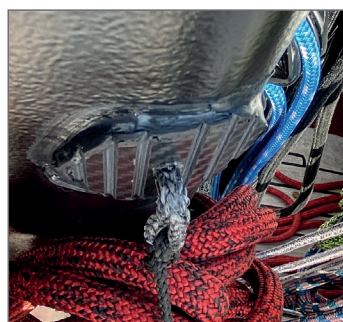

The 4 mm LOOP® Flexi Stickon can be bonded onto a 20 mm convex or concave radius (25 mm for the new 6 mm version), which opens up all sorts of new applications for these light-weight attachment points.

Here just some examples:

- **Cockpit** - Optimise your line bag attachments by moving the fixing points right into the beaded corners
- **Boom** - Quick, simple setup of lazy Jack or lazy bag dead-ends on the curved surface of the boom
- **Mast** - Rope tidy points around the mast – hang spare halyards or other lose lines next to the mast winch
- **Spinnaker pole** – position the outboard end trip line in the perfect location for your mast man

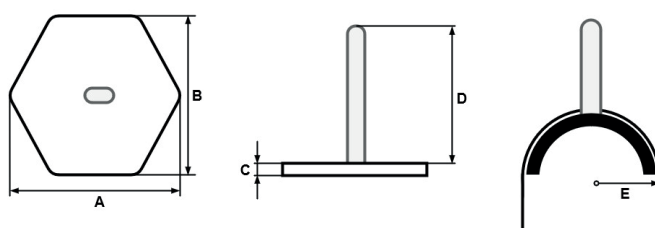

LOOP® Flexi Stickon's can be bent to a 20 mm radius

LOOP® Flexi Stickon used as rope tidy point on the mast

LOOP® Flexi Stickon glued to the curved surface of a boom
